Many students have gone on to get good degrees at good schools or gained entry to local universities via poly route, say principals and lecturers.

Dr Or Lay Tin, academic head of the University of London (UOL) programmes at SIM GE, said 1,200 students who enrolled on its UOL programme in the last three years have gained entry to local universities via polytechnic diploma courses, secured degrees at private schools here.

Many see this as a second shot and do well because they made the effort to do the A levels, said Dr Or.

"IGal Tin, academic head of the University of London (UOL) programmes at SIM GE, said 1,200 students who enrolled on its UOL programme in the last three years have gained entry to local universities via polytechnic diploma courses, secured degrees at private schools here.

Many see this as a second shot and do well because they made the effort to do the A levels, said Dr Or.

"I failed to get a place at the local universities last year, 34 had taken A levels. A handful of PVC students take A levels again each year. Most who do so had faced issues such as emotional problems in their second year," said Dr Or.
